

X Series 8 Shallow-Depth In-Wall Speakers

Let's face it. The marketplace is glutted with shallow depth in-wall speakers. Costs run the full gamut...from inexpensive to very pricey. Just what makes one better than another? Since they are buried inside a shallow wall cavity, its what you don't see that counts.

TECHNICAL HIGHLIGHTS

- The only shallow-depth speaker that can be tuned to the room's ideal audio qualities through James patented Adjustable Frequency Distribution Circuit.
- Acoustically perfected all-metal sealed cabinet chamber.
- Each unit includes a studio-quality 8" composite sandwich cone woofer and a 1" soft dome tweeter.
- Every speaker is furnished with complete hardware for simple "slide in" installation.
- Cloth grilles available in black or white. Paintable metal open-mesh grilles optional.

What separates James' "X" Series Model 8 In-Wall Speakers from all the other shallow-depth challengers is their proprietary Adjustable Frequency Distribution Circuit, not available in any other speaker brands in the world. This near-magic circuit allows you to easily tune each speaker for its specific position in the room. Built-in speakers have more serious problems delivering audiophile presence than freestanding models. Once they are installed, the spatial audio distance is unalterable. Plus, the physical angle of in-wall speakers cannot be adjusted toward the audience, or positioned for proper sound reflection.

But James' proprietary circuit, combined with an acoustically perfected cabinet and some of the finest Danish transducers in the world, has virtually solved this inherent nemesis of in-wall speakers. The point is, there is a host of in-wall speakers, but there is really only one choice...and its James!

Truly unique among In-Wall Speakers:

James proprietary Adjustable Frequency Distribution Circuit allows you to tune each in-wall speaker to optimize the sound quality to the room environment...even after they are installed!

Pictured are the Model 8 Series without grilles (above).

Standard black or white grilles on these speakers create an illusion that they are basically the same as most other in-wall speakers. But looks are deceiving. Beneath each grill is a dynamic two-way system in an acoustically perfected all-metal shallow-depth sealed chamber that delivers astounding audiophile-quality sound, rivaling even our own full-deph speakers.

Model 8 X Shallow-Depth In-Wall Speakers	
FREQUENCY RESPONSE:	40-20,000Hz ± 3dB
CROSSOVER POINTS:	6dB / Octave variable
NOMINAL IMPEDANCE:	8 Ohms
SENSITIVITY:	90dB @ 1 Watt @ 1 meter
MIN. POWER REQUIRED:	50 Watt RMS
DIMENSIONS:	14 ¹ / ₄ "H x 14 ¹ / ₄ "W x 3 ⁷ / ₈ "D
GRILLE DIMENSIONS:	18"H x 18"W
WEIGHT:	25 lbs.
WOOFER:	8" Comp. Sandwich Cone
TWEETER:	1" Soft Dome
ENCLOSURE TYPE:	Sealed Chamber, All-Metal Construction
